

General/About

Ceramic table tops are made from a solid ceramic slab that is actually harder than granite and is workable using techniques normally applied to glass and natural stone. Ceramic table tops are chemical resistant, fireproof, UV and heat resistant. Water absorption is close to zero, therefore, table tops are also completely frost-proof and weather resistant.

For Regular Maintenance:

Although dirt cannot penetrate into the ceramic material, it is necessary to remove it from the surface in order to prevent the build-up of surface grease and contaminants. Day to day maintenance of ceramic table tops can be performed by simply wiping down using a clean, microfiber cloth and warm, diluted, neutral detergent to remove surface spillages. Spillages of wine, coffee, ketchup, oils and acidic substances such as vinegar can be wiped off easily.

Things to Avoid:

Important to note Ceramic table tops are made from 3mm ceramic. Due to the design of the table, the edges of the table top overhang the base and are therefore unsupported at both ends and along the sides. Although ceramic is a strong material, it is not designed to take heavy weight over any unsupported lengths. Under no circumstances should any persons (including children) sit on the ends or sides of the table or climb onto the table top itself as this could cause the ceramic tops to break. We don't recommend either to move ceramic top tables by pushing on or lifting the table by the extensions.

Mobital is not liable for any damages or injuries as a result of such misuse.
