

### General Cleaning:

For general maintenance on your new piece of furniture; wipe with a soft damp cloth or vacuum on a low setting - use a clean soft brush attachment.

For stains; be sure to spot clean (dabbing motion - do not rub as this can cause damage to the fabric) with clear liquid soap and water as soon as your furniture reaches contact with the stain culprit.

After spot cleaning be sure to dry immediately after with a blow dryer on a low setting; this will prevent any water drying marks.

If your item has removable covers and spot cleaning has not successfully removed the stain, remove your covers and gently hand wash the entire cover and let soak in soap water, rinse and hang to dry.

If hand washing has not successfully removed the stain, you may use your washing machine. Be sure to cover any velcro material with fabric so that it does not pull and damage your covers in the wash. Hang to dry.

### Staff Tips & Tricks:

For oil stains: Dish soap mixed with water.

For turmeric stains: Dry in the sun after washing.

For loose strings: Use scissors to cut any loose threads. Do not pull on the thread.

For pilling: Use a fabric defuzzing or pill removing tool. Be sure to test a patch before doing large sections as every tool works differently.

### Things to Avoid:

Abrasive cleaning products or sharp scrub tools

### Things to Consider:

Close contact with a heat source can cause discolouration  
Tumble drying can shrink and damage your fabric covers
